Fixing a Small Bug

The demo application has a **small bug** at the moment: When adding multiple values, those values are added as strings instead of numbers.
Fixing it is easy though, simply make sure you enforce a number conversion:

In `ExpenseForm.js`, just change

```
1.  const expenseData = {
2.    title: enteredTitle,
3.    amount: enteredAmount,
4.    date: new Date(enteredDate),
5.  };
```

to

```
1.  const expenseData = {
2.    title: enteredTitle,
3.    amount: +enteredAmount,
4.    date: new Date(enteredDate),
5.  };
```

in the `submitHandler` function.
